

Card Battle Game

Kevin Chen, Kyle Chiu, Daniel Vo, Evan Kwan

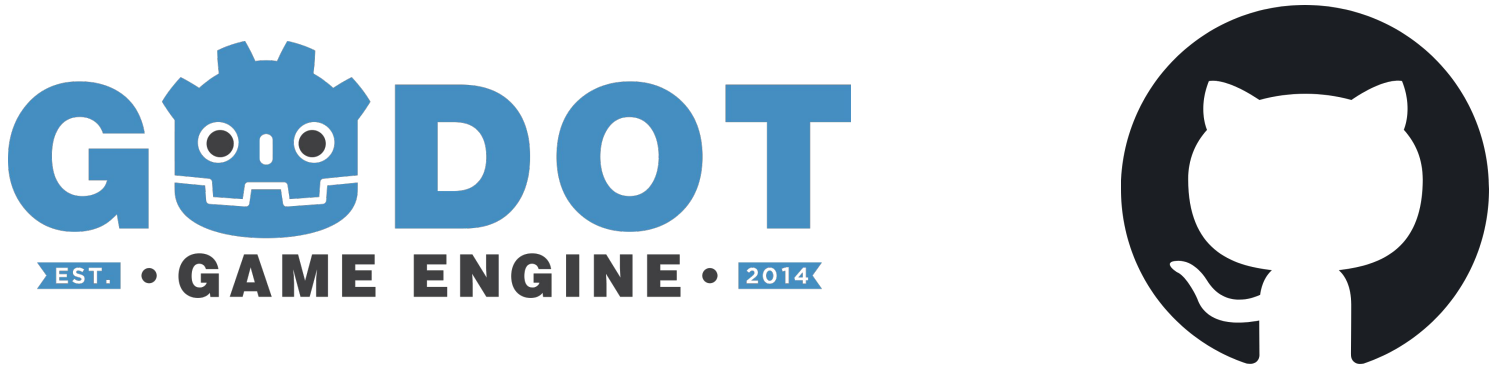

Introduction

Card Battle Game is a single-player tactical card battler that focuses on permanent progression rather than roguelike resets. it combines deck-building and RPG-style growth with a unique clash-based combat system. The idea of this game is that unlike roguelike deck builders, you keep your cards permanently like an online card game but its singleplayer and offline. The battle system would have clashing where you put 2 cards against each other that roll die until one rolls higher. The idea is for this to be similar to a standard rpg but instead of attacks you'd have cards to face the enemies instead.

Goals

- Further develop the systems of the game.
- Create menus and battle system.
- Functional version of the game by end of semester.

Tech Stack

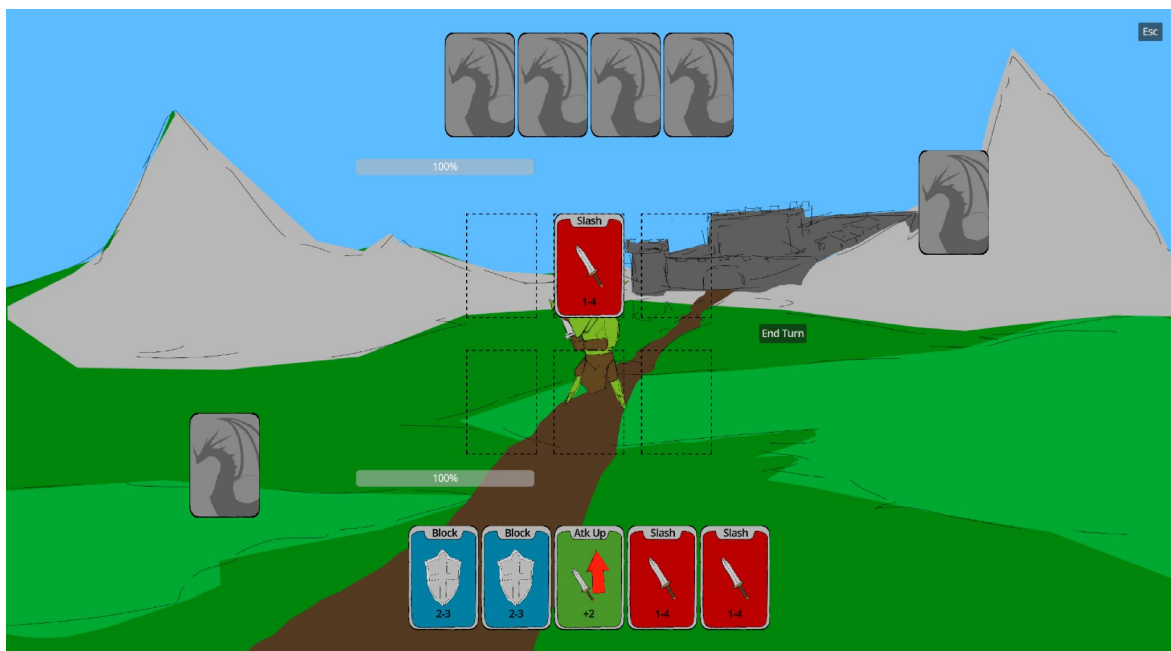

Results

We created a new starting menu where the player is able to choose their opponent and setting. They are able to customize their deck with the deck and card system.

Card deck editor, allows the player to modify their deck. They will be able to purchase cards from the shop to add to strengthen their deck.

New clash combat system, card rolls are now shown. Transitions between scenes are now implemented.

Win and lose graphics depending on the outcome of the battle.

List of currently implemented cards in the game.

id	card_name	type	min	max	effects	attached_items	weapon
1	Slash	attack	1	4	0	0	Sword.png
2	Block	defense	2	3	0	0	Shield.png
3	Ask Up	util	2	2	0	0	ask_up.png
4	Def Up	util	2	2	0	0	def_up.png
5	Heal	util	3	3	0	0	heal.png
6	Gun	attack	5	7	0	0	gun.png
7	Stick	attack	1	2	0	0	Stick.png
8	Rock	attack	1	3	0	0	Rock.png
10	M. Missile	attack	3	5	[def_down]	0	Shield.png
11	M. Shield	defense	4	5	[ask_down]	0	Shield.png
12	Fireball	attack	4	6	[burned_def_down]	0	Shield.png
13	Gun+	attack	99	999	0	0	gun+.png

We designed a lot of enemies to use in future battles in our campaign to fight against. Each of them will have unique cards yet to be designed. Some of these can currently be selected as enemies.

Conclusions

Card Battle Game is a functional single player tactical card battler built in Godot 4. The clash system is fully implemented, allowing players to play cards across three lanes, roll for outcomes, and apply utility buffs strategically. A working deck editor, enemy AI, and win/loss flow give the game a complete gameplay loop.

Future Plans

We can continue working on deeper systems such as gold economy, classes, and a campaign. We are also currently working on a bounty system where you can fight enemies for more gold.
